

The project "DEMONSTRATIVE AND INCLUSIVE PORTABLE AQUAPONICS UNIT" funded by the GALP Terres de l'Ebre is entering its validation phase at the IRTA la Ràpita before being transferred and installed at its testing destination where it is intended to generate a social economy model co-managed by producers/users with special interest in communities with people at risk of social exclusion and people with special abilities (people with intellectual, sensory, auditory-visual, mental and physical disabilities).

#aquaponics #GALPMar de l'Ebre. We went from prototype to testing version in record time and are now adding the adaptive and intuitive control and sensory layer.
